

DENDROBIUM

Hardened Plants

Dendrobium,

(abbreviated as Den) The name is from the Greek dendron meaning tree and bios meaning life. The genus occurs in diverse habitat throughout Himalayas to southeast Asia, including the Philippines, Borneo, Australia, New Guinea, Solomon Islands and New Zealand.

The orchids in this genus often develop pseudobulbs, which unite into a long reed like stem. They grow quickly throughout summer, but take a long rest during winter. In the spring, new shoots are formed from the base of the main plant. Plants generally require a reduction of watering or with holding of water during the winter due to dormancy period. Plants grow in a variety of temperature ranges and lighting ranges which is dependent on the species. Plants can usually be mounted.

Basic Orchid Care

1. Keep your orchid in the semi shade area
2. Maintain proper air circulation
3. Watering your media whenever they are dry
4. Spray your orchid plants when your plant is dry
5. Media should hold proper moisture, it should be prous and iry but not soggy.

Hint & Tips

Orchids like to keep their feet dry. Always water our plants early in the day to allow for water to dry before cooler night time temperatures. Use cotton swabs to remove excess water that get stuck in the little nooks of your plant.
